

OBJECTIVES ATTAINMENT REPORT

Project Information

Project Name	Automated Water Level Controller
Date Of Report	06/02/2024
Projected Date of Completion	06/02/2024
Project Member	- Shanjida Afrin - Paromita Chanda - Nusrat Jahan

Objectives Attainment

Objectives	How it has been attained
1. To ensure efficient water usage and prevent wastage	Efficient water usage and prevention of wastage have been achieved through the implementation of an automated water level control system, which utilizes various sensors and controllers to accurately monitor and manage water levels in tanks or irrigation systems. These systems enable timely activation and deactivation of the motor, ensuring optimal usage and minimizing unnecessary water loss.
2. To minimize water-related expenses, including bills and maintenance by preventing overflow from tank	The objective of minimizing expenses and preventing tank overflow is achieved by implementing our automated system which reduces the need for costly maintenance, repairs, and labor charges. Also, we used an IC as the major component to cut the cost even more. So, this project is very affordable even if we use it in residential water tanks, swimming pools, spas, etc.
